Introduction

This brief research note presents the updated WhoGov-dataset. The updated dataset contains information on cabinet members in July every year for the period 1966–2021 in all countries with a population of more than 400,000 citizens.¹ In comparison, the first version of the dataset only contained data up to 2016 for most countries. In total, the dataset contains yearly information on 56,063 cabinet members in 177 countries. This amounts to 249,957 rows with minister-year information, and 8,811 country-years. The dataset can be downloaded from [the project's webpage](#).

Apart from the longer time-period, the new version of WhoGov is largely similar to the original version. There are only two additional variables, both are added so it is easier to connect WhoGov with PartyFacts, and there are thus no substantial changes to the codebook. As a result, we refer readers to the original article and codebook for information on WhoGov. The supplementary materials can be found [here](#). As with all datasets, and despite our best efforts, mistakes cannot be ruled out with absolute certainty, and readers are encouraged to contact the authors at whogov@nuffield.ox.ac.uk if they find any.

Apart from the introduction, the research note consists of three parts. First, we discuss changes which may be of relevance for users of the updated dataset. Second, we present the descriptive statistics on the variables included in the cross-sectional dataset. Lastly, we present an updated list of countries with basic information for each country.

Notes to users on the updated dataset

The update is - as the original dataset - based on the *Chiefs of State and Cabinet Members of Foreign Governments* directory compiled by the Central Intelligence Agency (CIA). Unfortunately, the directory has become less precise after 2016, partly because it has been updated less frequently. Therefore, we have double checked every entry against at least one secondary source to ensure that the data is correct for July every year. For most countries we rely on Wikipedia, government websites, Europa Regional Surveys of the World, the Political Handbook of the World, and The

¹It has not been possible to obtain the files from July in 1970. Instead, we use January for 1970.

International Directory of Government 2021 for information. However, for some countries these sources were insufficient and we therefore had to rely on alternative sources, such as local or international newspapers, LinkedIn, or other social media platforms. We have gathered data on gender, age, and party-affiliation in the same way as the original dataset, and we refer to the original supplementary materials for more information on this.

In addition to updating the dataset up to 2021, there are a few changes that may be of interest. These are as follows:

- We have corrected mistakes (around 80) that have come to our attention. The bulk of these are fairly minor, such as spelling mistakes in the name or the wrong date of birth for particular individuals. Most importantly, we were informed that the data for Syria in 1983 were incorrect due to a bad scan. This has been corrected.
- We have added age for more countries to the dataset. We expect to release data on age for more countries in future versions of WhoGov.
- The variable *n_party* mistakenly included NAs as an extra party. This has been corrected, so these no longer counts towards the number of parties.
- We have added two variables that will make it easier to connect WhoGov with **PartyFacts**. Party Facts is a project that links various datasets on political parties. The two new variables are:
 - *whogov_partyid* which is a unique WhoGov Party ID created by parsing *country_isocode* with *party*.
 - *partyfacts_id* which is the unique ID used in PartyFacts.

Descriptive statistics
